

FictStream Data & Content Policy Guidelines

Data Access Policy

All viewer data is classified as PII and subject to GDPR and local equivalents. Viewer emails, names, and payment details must not be exposed in analytics queries. Aggregated viewer data (age group, region, tier) is approved for analytics use. Individual viewer profiles require explicit DPO approval before access.

Content Rating Guidelines

All content must carry an audience rating: G, PG, PG-13, R, or NC-17. Parental control features are mandatory on all family subscription tiers. Marketing materials must reflect the content rating of the advertised title.

AI and Recommendation Policy

AI-driven recommendations must not discriminate based on protected characteristics. Recommendation bias audits are conducted quarterly by the Trust & Safety team. All AI-generated content summaries must be clearly labeled. User data used for recommendations is anonymized at the feature extraction stage.

Third-Party Integration Policy

All third-party APIs used in production require security review. Vendor data sharing agreements must be reviewed by Legal before implementation. External analytics tools may receive only aggregated, de-identified datasets.
